

PATIENT CLINICAL NOTES

Patient ID	P005
Date of Evaluation	September 18, 2026
Treating Provider	Dr. Ananya Sharma
Requested Treatment	Advanced Therapy X
Condition	Condition Alpha

1. Clinical Evaluation

The patient has moderate-to-severe Condition Alpha. The diagnosis is documented in the patient's medical record. The patient is being evaluated for Advanced Therapy X.

2. Previous Treatment

The patient was previously treated with Treatment A. Treatment A was started on March 1, 2026 and discontinued on April 12, 2026. The documented treatment duration was approximately 6 weeks.

3. Treatment Response

The patient reported inadequate clinical improvement while receiving Treatment A. The treating provider documented that the treatment was discontinued because the patient did not achieve sufficient clinical improvement.

4. Treatment Outcome

Treatment A was considered ineffective due to inadequate clinical response. The treatment was discontinued after approximately 6 weeks.

5. Assessment and Plan

Advanced Therapy X is being considered because the patient's Condition Alpha remains clinically significant despite previous Treatment A. The prior treatment history and response are documented above.

Demo note: This synthetic clinical record is intended for testing the PriorAuth AI prototype. It contains an explicit 6-week Treatment A duration, which should cause a guideline requiring at least 12 weeks of Treatment A to be assessed as **NOT_SATISFIED**.
